

AIR CONDITIONER FOR VEHICLE USE

5

ABSTRACT OF THE DISCLOSURE

10 When it is assumed that a vehicle is stopped or
parked after its engine was stopped and a predetermined
period of time has passed, a cold wind side air mixing
door, hot wind side air mixing door, cold wind door and
rear cold wind side air mixing door are totally closed
and a blower is operated for a predetermined period of
time. Accordingly, while a cooler is being dried, drying
15 air containing much offensive smell components, which has
passed through the cooler, is discharged outside the
vehicle. Therefore, it is unnecessary to provide an
exclusively used air passage and an opening and closing
door for opening and closing the air passage used for
20 composing an air blowing passage to dry the cooler. By
utilizing the existing equipment, air used for drying,
which has passed through the cooler, containing much
offensive smell components can be discharged outside the
vehicle.
